Appl. No. 10695240

Amdt. dated January 28, 2008

Reply to Office action of September 27, 2008

## In the Claims:

Claims 2 and 4 are amended herein. Claims 1 and 3 are canceled.

- 1. (canceled)
- 2. (currently amended) A method of further identifying a bridge uplink port in a network in accordance with claim 1, further comprising the steps of: A method of identifying a bridge uplink port in a network, comprising the steps of:
- (a) sending an ICMP ping to all known bridges within said

  network and thereby causing forwarding data base tables of said

  bridges to store MAC addresses and interface indices of adjacent

  bridges;
- (b) sending an SNMP query to a selected bridge to retrieve stored contents of a forwarding data base table of said selected bridge;
- (c) for any interface index retrieved from said selected

  bridge, identifying a port associated with said interface index
  as an uplink port of an adjacent bridge;
- (d) downloading the contents of all of said forwarding data base tables of said known bridges;
- (e) counting a number of MAC addresses associated with each port of said bridges; and

(f) identifying a port as an uplink port if said number of MAC addresses counted exceeds a predetermined number.

- (canceled)
- 4. (currently amended) A test instrument operation methodin accordance with claim 3, further comprising the steps of: A test instrument operation method for employing the test instrument to identify a bridge uplink port in a network, comprising the steps of:

connecting the test instrument to the network;

sending from the test instrument an ICMP ping to all known bridges within said network and thereby causing forwarding data base tables of said bridges to store MAC addresses and interface indices of adjacent bridges;

sending an SNMP query from the test instrument to a selected bridge to retrieve stored contents of a forwarding data base table of said selected bridge; and

for any interface index retrieved from said selected bridge,
having the test instrument identify a port associated with said
interface index as an uplink port of an adjacent bridge;

downloading to the test instrument the contents of all of said forwarding data base tables of said known bridges;

counting a number of MAC addresses associated with each port of said bridges; and
